CAREER OBJECTIVE

Internship (Summer) / Full-time (After Graduation) — Simulation Engineer, focused on real-time simulation pipelines and modelling for engineering and training applications. Also open to Robotics Software Engineer roles.

EDUCATION

University of Bristol <i>MSc, Robotics</i>	2026.09 – 2027.09
Beijing Film Academy <i>MFA, Film · Average grade: 89/100 · Third-Class Scholarship, 2023–2024</i>	2022.09 – 2026.07
Sichuan Fine Arts Institute <i>BFA, Animation · Average grade: 83.5/100</i>	2016.09 – 2021.06

WORK EXPERIENCE

National Centre of Applied Mathematics (Chongqing) <i>Simulation Development Intern — Intelligent Transportation Simulation</i> - Built a synthetic-data generation pipeline combining SUMO traffic simulation with Blender rendering: SUMO-generated traffic flows were imported into Blender with pre-built 3D vehicle and scene assets, then rendered into RGBA image sequences via a virtual camera to produce realistic training data. - Optimised the rendering pipeline from full PBR to unlit shading, cutting per-frame render time from 20s to 1s — shifting the workflow from offline batch data collection to real-time, on-the-fly training data generation. - Integrated imgaug-based augmentation into the rendering output to add weather (fog, snow) and camera-artefact variation, improving the diversity and robustness of the training data. - Researched reinforcement-learning approaches for adaptive algorithm selection within traffic-simulation scenarios.	2025.06 – 2026.01
INF Technology (Shanghai) Co., Ltd. <i>3D Art Intern</i> - Cleaned and retargeted motion-capture data in Maya; designed and produced character animation. - Implemented real-time object-interaction effects in Unreal Engine 5 using the Niagara particle system.	2024.05 – 2024.09

PROJECTS

Distributed System based on the Raft Protocol Implemented core Raft mechanisms — leader election and log replication — with RocksDB integrated for data persistence.	2024.06 – 2024.09
Memory Pool Implemented an memory pool in C++ to address memory fragmentation and reduce performance overhead.	2024.09 – 2024.12

SKILLS

- Simulation & Engines:** SUMO, Blender, Unreal Engine 4/5, Unity, imgaug
- Programming & Systems:** C/C++, Python, Linux (Ubuntu 22), GCC/GDB, CMake, VS Code, Visual Studio
- Distributed Systems & Middleware:** Raft, RocksDB, Redis, TCMalloc
- 3D & Visual:** Maya, ZBrush, 3ds Max, Substance Painter, Marvelous Designer, Marmoset Toolbag, Adobe After Effects / Premiere, Photoshop
- Languages:** IELTS 7.5 (Listening 8.5, Reading 8, Speaking 6.5, Writing 6.5)
